LUMEN

Power your growth in India with Lumen

Experience high-performance, wide-coverage network connectivity across 1,500 cities in India

A licensed provider in India

Secure, reliable network connectivity

India is one of the most important global business markets with unparalleled potential and rapid innovation. Network connectivity is at the core of any business, but having consistent and reliable network connectivity could prove challenging.

Navigating a landscape of 1,000+ internet service providers (ISPs) can be complex and time-consuming. Critical business operations that rely on robust connectivity cannot afford any unplanned network downtime or fluctuations.

By conquering these unique network hurdles in India, international enterprises can unlock vast opportunities and grow their business rapidly.

Connect and accelerate your growth
### – quickly, securely, and effortlessly

Help you focus on growth

Unleash your growth potential with reliable, low-latency network. Our network solutions empower you to execute your business strategy seamlessly, accelerating your time to market and reaching new customers faster.

Rapid response to changes

Easily scale network bandwidth and connectivity that adapt to the evolving market conditions. Seize new business opportunities and deploy new digital strategies to innovate faster without any network limitations.

Simplify network management

Manage your entire India network strategy with a single licenced provider, eliminating the struggles of managing multiple vendors and SLAs. Saving time and resources with greater transparency, while streamlining the entire process from procuring services to local billing.

Reduce risk and downtime

A secure, high-availability and redundant network minimises network outages, which translates to better productivity hours and lower revenue risk. This ensures your critical business operations remain uninterrupted and protected.

## Power your expansion in India

Supercharge your connectivity

Lumen's products and services, delivered to India on its ultra high capacity international backbone supporting VPN and Ethernet Services upto 10G and beyond that are catering to large data transfer and applications
